Enhancing Experience Through AI

UBUNYE AI

**Redefine
Business
Workflow**

Artificial Intelligence technology.

Intelligent Document Processing (IDP) uses artificial-intelligence-based technologies to **process structured, semi-structured, and unstructured documents**.

IDP enables straight-through processing of documents by automatically **capturing, extracting, and processing data** embedded in business documents, in just about any process in any industry

Legacy & **Evolution**

ScannerVision™, a Document Processing Solution has over the last decade successfully been able to automate document workflows that operate seamlessly with scanned documents and various documents generated by other applications.

This has been achieved through the creation of custom templates, which in turn enable straight-through processing of documents by automatically extracting metadata and storing the documents and metadata in various locations.

With the added benefits of the **Ubunye AI**, you are now able to identify, classify, and manage your records efficiently

Features & Benefits

Seamless Integration with ScannerVision™
The **Ubunye AI** connector provides seamless integration with **ScannerVision™** and offer additional and in-depth document processing, facilitates the transfer of documents and OCR results.

Quick Custom Template Configuration
Design custom templates and workflows effortlessly to suit your business.

Document models & learning capability
The **Ubunye AI** module is able to extract key data from standard documents and has the ability to learn any other document types through model training.

Continuous Improvement
With continuous human feedback loop, you can improve the accuracy of your AI models to achieve higher confidence scores of the extracted data.
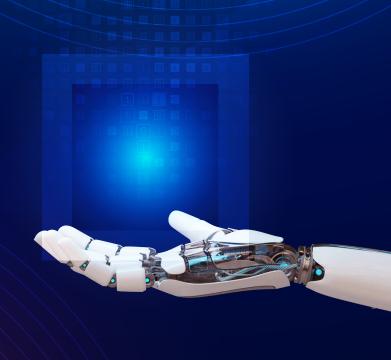

On-demand service
You only pay for the pages you send to the **Ubunye AI**, so with effective template design you can keep costs low.

The *advantages* of
Artificial Intelligence.

One of the biggest advantages of Artificial Intelligence is that it can significantly reduce errors and increase accuracy and precision.

The **Ubunye AI** has been designed to increase productivity, speed up document retrieval, increase accuracy, reduce manual efforts, improve processes efficiency, automate document classification.

Automate your document processes for optimum efficiency with **Artificial Intelligence.**

With the implementation of Ubunye AI, you can automate various business processes, freeing up your resources from repetitive tasks and optimise efficiency by allocating them to focus on business-critical tasks.

The machine learning capability of Ubunye AI empowers you to make informed decisions, enhancing customer experience, improving your return on investment, and complements the sustainability and continuity of your business growth.
